REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance:

As noted in Appellant's Brief of 19 December 2005, a principle issue here is the interpretation of lines 28-37 on page 4 of the EP 0 845 505 reference of Lu et al. The undersigned examiner understands this paragraph to teach that a TiBN layer can be used as a diffusion barrier to prevent a reaction between a tungsten layer and a poly layer in a gate electrode, or, that a TiBN layer can be used as an adhesion promoter to adhere a tungsten layer of a gate electrode to a gate insulator. Because neither of these embodiments would give rise to the exact order of layers recited in independent claims 1 and 23 pending here, and because the secondary reference of Lur et al. also does not teach the layers of these claims, then the two teachings together do not make out a prima facie case of obviousness. Also, the prior art does not appear to teach the property of the TiBN layer as recited in the independent claims (with the boron aiding in preventing diffusion of fluorine from the conductive layer into the gate dielectric layer). So the subject matter "as a whole" would not have been obvious in view of these two references, as required by section 103 of the statute.

The amendment of 21 September 2005 has been entered.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably
